Is Your Organization Ready to Manage Population Health?

Take our rapid assessment to find out.

As the nation's health care system moves from a fee-for-service model to a value-based care model, population health management has become all the rage. Doing it right requires organizations to have strong operations, processes, and systems across eight disciplines. Is your organization ready to transform to this emerging model of care?

1 **Governance and Strategy** YES NO
Can you describe the various legal structures that have either been created or are working in conjunction with each other to provide your integrated value-based care model?

2 **Administration and Finance** YES NO
Does your leadership team understand population health and its requirements? Does your team have dedicated resources responsible for ensuring the success of your population health strategy, including the management of complex relationships, diverse revenue streams, innovative payment alignment, and risk-based payments?

3 **Network Support** YES NO
Is your organization positioned to provide a diverse network of providers and resources to assist patients in supporting patient care delivery and management across all service areas and the entire care continuum?

4 **Advanced Primary Care and Patient** YES NO
Is your organization providing patient-centered focus care models to include staffing, financial management, HIT, quality improvement, patient experience, and quality and performance metrics?

5 **Chronic Care Management Practices** YES NO
Does your organization routinely and adequately evaluate the use of data registries, clinical pathways, monitoring programs, outlier providers, non-compliant patients, electronic data capture, group and practitioner metrics, and risk stratification for chronic care?

6 **Health Plans and Insurance** YES NO
Can your organization define current products and risk tolerance for changed payment model structures?

7 **Information Technology** YES NO
Does your plan define software product reviews to include contract costs and terms; functionality in relation to population health; optimization of current tools; HIT Infrastructure; networks and bandwidth; EMR funtionality assessment; HIT goals and staffing?

8 **Accountability and Transparency** YES NO
Does your organization define financial reporting, performance incentives, monitoring strategies, and accountability for providers with a solid governance and management structure? Does your organization have a plan for costs and strategies for recoupment of implementation?

If you answer NO to any of these questions, let Centralis Health help you get ready. Contact Kandi O'Brien today to learn more.
